

MAT 121 Statistics I

Midterm Exam #1

09/27/2023

Time: 90 minutes

Problem 1.

The following is a sample of ages (in months) of 18 children at a daycare:
18 19 22 22 24 24 25 26 28 29 29 30 31 32 35 36 36 42
What is the median age of the sample?

Answers *

☐ 31

IntroStatsApps: Descriptive Statistics

Types of Descriptive Statistics

Numerical Measures

comma separated numerical data

18, 19, 22, 22, 24, 24, 25, 26, 28, 29, 29, 30, 31, 32, 35, 36, 36, 42

Measure Types

measures of center

[Report bugs to C. Peng](#)

Measures of Center

The data values are:

18, 19, 22, 22, 24, 24, 25, 26, 28, 29, 29, 30, 31, 32, 35, 36, 36, 42

The sorted data values are:

18, 19, 22, 22, 24, 24, 25, 26, 28, 29, 29, 30, 31, 32, 35, 36, 36, 42

1. Sample (population) mean

$\bar{x} = \sum_{i=1}^n \frac{x_i}{n} = 28.2$, and $\mu = \sum_{i=1}^n \frac{x_i}{n} = 28.2$ (if this data set is a population).

2. Median

The median of a given data set is the middle number of **sorted** data set. Based on this definition, the median of the given data set is: 28.5

3. Mode

A data value that appears most frequently (frequency > 1) is called the mode of the data. Based on this definition, a set of data may have one mode, more than one mode, or no mode at all. Using the above definition, this data set has 4 modes: 22, 24, 29, 36.

Problem 2.

The following grouped frequency table of the income, x , of 30 employees at a local small business (in \$1000s).

Income	[26, 28]	(28, 30]	(30, 32]	(32, 34]	(34, 36]
Frequency	2	11	8	5	4

The relative cumulative frequency of the $28 < x \leq 30$ class is

Answers *

Five Number Summary and Boxplot

The data values are:
3, 4, 4, 5, 5, 6, 8, 10, 10, 12, 15, 18

1. Five Number Summary :

The five-number summary is used to describe the shape of the distribution of a given numerical data. It consists of five numbers: minimum data value, first quartile, the median, the third quartile, and the maximum data value.

The five-number summary of this given data set is:

stats	value
Min.	3.00
1st Qu.	4.75
Median	7.00
3rd Qu.	10.50
Max.	18.00

2. Boxplot :

The boxplot is a geometric representation of the five-number summary. The boxplot of the given data set is given below.

Choose a one that is close to the true one.

Problem 9

The cholesterol content of large chicken eggs is **uniformly** distributed between 190 and 210 milligrams. The density curve has a rectangular shape.

What proportion of these eggs has cholesterol content above 205 milligrams?

Answers *

5/20

Types of Descriptive Statistics
Numerical Measures

comma separated numerical data
4,11,11,13,15,18

Measure Types
measures of variation

Report bugs to C. Peng

Measures of Variation

The data values are:
4, 11, 11, 13, 15, 18

The sorted data values are:
4, 11, 11, 13, 15, 18

1. Sample (population) variance

$$s^2 = \sum_{i=1}^n \frac{(x_i - \bar{x})^2}{n-1} = 22.4, \text{ and } \sigma^2 = \sum_{i=1}^n \frac{(x_i - \mu)^2}{n} = 18.7 \text{ (if this data set is a population)}$$

2. Sample (population) standard deviation

The standard deviation is the square root of variance. Therefore, the both standard deviations are: 12

$$s = \sqrt{s^2} = \sqrt{\sum_{i=1}^n \frac{(x_i - \bar{x})^2}{n-1}} = 4.7, \text{ and } \sigma = \sqrt{\sigma^2} = \sqrt{\sum_{i=1}^n \frac{(x_i - \mu)^2}{n}} = 4.3 \text{ (if this data set is a population)}$$

3. Inter - quartile range (IQR)

The inter-quartile range is defined to be the difference between the first and third quartiles. By the definition,
 $IQR = P_{75} - P_{25} = 15 - 11 = 4$.

$$\frac{112}{5} = 22.4$$

Problem 11

A national achievement test is administered annually to 3rd graders. The test score is a continuous random variable that has a mean score of 100 and a standard deviation of 15. What is the probability that a randomly select student scored 95 in the test?

2. Which Probability?

- ☒ $P[V_0 < X < V_1] = ?$
☐ $P[X > V_0] = ?$
☐ $P[X < V_0] = ?$

Given Value #1: V_0

60

Given Value #2: V_1

80

3. Input Information

Population Mean: μ

70

Population Standard Deviation: σ

10

Sampling Distribution

Given Information
 $V_0 = 60$
 $V_1 = 80$

Question:

$$P(60 < X < 80) = ?$$

Step 4. Finding P_0 :

$$\begin{aligned} P\left(\frac{60-70}{10} < \frac{X-70}{10} < \frac{80-70}{10}\right) \\ &= P(Z_0 < Z < Z_1) \\ &= P(Z < Z_1) - P(Z < Z_0) \\ &= P(Z < 1) - P(Z < -1) \\ &= 0.8413 - 0.1587 = 0.6826 \end{aligned}$$

Step 5. Answer:

$$P(60 < X < 80) = 0.6826$$

Standard Normal Distribution

Step 1. Z-score Transformation

$$Z = \frac{X - 70}{10}$$

Step 2. Z-scores for V_0 and V_1

$$Z_0 = \frac{60 - 70}{10} = -1$$

$$Z_1 = \frac{80 - 70}{10} = 1$$

Step 3. Finding the left-tail Probabilities

$$P(Z < 1) = 0.8413$$

$$P(Z < -1) = 0.1587$$

Problem 14

The scoring of modern IQ is such that Intelligence Quotients (IQs) have a normal distribution of $\mu = 100$ and $\sigma = 15$.

Mensa International is a non-profit organization that accepts only people with IQ scores within the top 2%. What level of IQ qualifies one to be a member of Mensa?

Answers *

cannot be determined

1. What to Find?

- ☐ Probability (P_0)
☒ Percentile (X_0)

2. X_0 in Which Probability?

- ☐ $P[X_0 < X < V] = P_0$
☐ $P[V < X < X_0] = P_0$
☒ $P[X > X_0] = P_0$
☐ $P[X < X_0] = P_0$

Given Probability: P_0

0.02

3. Input Information

Population Mean: μ

100

Population Standard Deviation: σ

15

Sampling Distribution

Question: Given $P(X > X_0) = 0.02$, what is X_0 ?

Step 3. Finding X_0 :

$$P\left(\frac{X - 100}{15} > \frac{X_0 - 100}{15}\right) = 0.02$$

or equivalently,

$$P\left(Z > \frac{X_0 - 100}{15}\right) = 0.02$$

Therefore,

$$\frac{X_0 - 100}{15} = Z_0 = 2.05.$$

Step 4. Answer:

$$X_0 = 100 + (2.05) \times 15 = 130.75$$

Standard Normal Distribution

Step 1. Z-score Transformation

$$Z = \frac{X - 100}{15}.$$

Step 2. Find the Z-score corresponding to X_0

$$P(Z > Z_0) = 0.02,$$

or equivalent, $1 - P(Z < Z_0) = 0.02$.

Therefore, $Z_0 = 2.05$.

Problem 15.

A physical fitness association is including the mile run in its secondary-school fitness test. The time for this event for boys in secondary school is known to possess a normal distribution with a mean of 440 seconds and a standard deviation of 60 seconds. Find the probability that a randomly selected boy in secondary school can run the mile in less than 302 seconds.

4

Sampling Distribution

Given Information
 $P_0 = 0.1$

Question: Given $P(X < X_0) = 0.1$, what is X_0 ?

Step 3. Finding X_0 :

$$P\left(\frac{X - 22}{4} < \frac{X_0 - 22}{4}\right) = 0.1$$

or equivalently,

$$P\left(Z < \frac{X_0 - 22}{4}\right) = 0.1$$

Therefore,

$$\frac{X_0 - 22}{4} = Z_0 = -1.28.$$

Step 4. Answer:

$$X_0 = 22 + (-1.28) \times 4 = 16.88$$

Standard Normal Distribution

Step 1. Z-score Transformation

$$Z = \frac{X - 22}{4}.$$

Step 2. Find the Z-score corresponding to X_0

$$P(Z < Z_0) = 0.1.$$

Therefore, $Z_0 = -1.28$.

Summary of Midterm Exam #1

Histogram of the class grade distribution

1. Five Number Summary :

The five-number summary is used to describe the shape of the distribution of a given numerical data. It consists of five numbers: minimum data value, first quartile, median, the third quartile, and the maximum data value.

The five-number summary of this given data set is:

stats	value
Min.	48.00
1st Qu.	76.00
Median	80.00
3rd Qu.	88.00
Max.	96.00

2. Boxplot :

The boxplot is a geometric representation of the five-number summary. The boxplot of the given data set is given below.
